Rechon Life Science AB of Sweden Partners with Adents for Scalable Serialization & Aggregation Solution

Adents Software to Be Incorporated on Rechon's Existing ACT-Logimark Printing Equipment

Paris, France & East Windsor, NJ – **Rechon Life Science AB**, a Sweden-based pharmaceuticals developer and contract manufacturer, has partnered with **Adents**, a leading provider of versatile serialization and aggregation software products, to offer its customers a scalable track & trace solution that complements its pharmaceuticals production and packaging services. For Adents, the deal represents further geographical expansion of its widening global customer base, including its first foray into Scandinavia.

In choosing Adents, Rechon addresses compliance with several looming serialization mandates, including the European Union Falsified Medicines Directive and the USA's Drug Supply Chain Security Act. Eventually, all track & trace applications will be interfaced with Rechon's Enterprise Resource Planning (ERP) system.

To meet its evolving needs, Rechon required a software solution that was flexible enough to change line configurations per client needs, able to generate and securely import/export unique serial numbers, and offered a workable pricing model. Just as importantly, Rechon sought to use its existing infrastructure to incorporate this serialization solution. Rechon has close ties with **ACT-Logimark**, a Sweden-based printing equipment provider and systems integration specialist.

The Adents serialization and aggregation suite of software enables companies to achieve traceability and documentation compliance easily, addressing both current and emerging regulations while also minimizing impact on production processes and productivity. An ideal “standardized software” approach, Adents unit identification and traceability software is extremely flexible, scalable, and quick to deploy as it does not require add-on hardware. It also helps enrich marketing and eliminate counterfeiting.

Rechon offers a comprehensive range of pharmaceutical services, including the preparation, filling, packaging and distribution of commercial products as well as Clinical Trial Supplies. The company’s cGMP contract pharmaceutical development services include process and analytical development; manufacturing, supplies and services for clinical trials; stability studies; storage and distribution and Qualified Person (QP) release services.

Maria Wingren, Manager Projects & Validation, said: “As a company that manufactures and packages pharmaceutical products for leading pharmaceutical companies around the world Rechon requires regulatory solutions that address a wide array of both customer and internal needs. In Adents Pharma Suite software, we believe we’ve found a easy to use, standardized solution that meets the complexities of current and future track & trace mandates – a flexible, scalable approach that works within our existing hardware and various, client-specific line configurations.”

According to **Christophe Devins, CEO and Founding Partner of Adents**: “Our partnership with Rechon is far more than a typical vendor-customer relationship. It establishes an ecosystem of system integrators capable of implementing serialization solutions expediently and on a grand scale. This deal also brings together a consortium of experts capable of addressing track & trace issues from a holistic view – the effective marriage of software, hardware and line integration.”

About Rechon Life Science AB

Rechon Life Science AB is a pharmaceuticals developer and contract manufacturer & packager whose core business is transforming both its own and its customers’ technologies and formulations into validated, approved pharmaceuticals and medical products that fulfill customer specifications and expectations. Rechon achieves this through a rigorous, proven project process combined with state-of-the-art production and packaging facilities.

Rechon’s extensive and strict systems for quality assurance and control have earned the company’s operations approval from the FDA and other key regulatory bodies around the world. To learn more, please visit www.rechon.com.

About Adents

Adents is a software specialist that develops unique product identification and traceability solutions, helping pharmaceutical manufacturers and contract packagers adapt to market changes and comply with serialization regulations. Adents Pharma Suite utilizes user-friendly, standardized software compatible with both information systems (ERP, MES) and existing production and packaging equipment. Easily upgradable, the software is designed to address both current and emerging regulations to help pharma companies remain in compliance long-term.

Adents Pharma Suite serialization software was recently awarded an Innovation Award from *Medicine Maker*, a UK-based publication focusing on the pharmaceutical manufacturing sector.

Founded in 2007, Adents operates in the United States, Canada and Europe. For more information, visit www.adents.com.
